

Electrostatic Disinfecting Services

Disinfecting every surface can be tricky. Luckily, we're here to help. Our electrostatic service will save you time and money.

Why Electrostatic?

- Safer chemicals are applied more evenly and in hard to reach places, ensuring for more protection.
- Significantly reduces the time it takes to thoroughly disinfect every surface, by letting the electrostatic do the work.
- Small droplet sizes and with higher coverage improves the bioavailability of disinfectant compounds.
- Low volume spray means less chemical exposure for everyone.
- Minimize possible exposure to viruses such as COVID-19, influenza, salmonella and more.

How it Works

After choosing the correct disinfectant for your space, the chemicals are then put into an Electrostatic Spraying System. This system adds a positive charge to the particles of the disinfectant. By doing so, the particles are now pulled towards surfaces that have a negative charge.

When the positively charged disinfectant is attracted to the negative particles on a surface, it creates an affect that pulls the disinfectant into hard to reach areas. This creates allows the disinfectant to cover surfaces more evenly and efficiently.

Save Money

Better sanitation means less employees getting sick

Save Time

Electrostatic is a much faster process than traditional disinfecting methods

Save The Environment

Reduce environmental waste and harsh chemicals in our air

Why Us

74+ Years of Safety

For over 74 years safety has been one of our number one concerns.

Choose Your Disinfectant

Our systems are capable of using most disinfectants.

Trained Professionals

Our staff is trained to give only the best possible results.

48,000+ Sq Ft/Hour

We can disinfect faster than most competitors.

Satisfaction Guaranteed

We put your needs first to make sure you get exactly what you're looking for.

Consultation

Not sure what products are best for your space? Just ask!

Proof of Sanitation

We use the industry standard ATP testing kits to ensure the cleanest surface possible.

Quick Response

You can typically expect a response from us within 24 hours!
